No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

One form is full-length (hKv4.3 long) while the second form has a deletion of 19 amino acids in the carboxy domain after the predicted sixth transmembrane domain (hKv4.3 short). Human heart primarily expresses hKv4.3 long, whereas human brain contains both forms. To obtain the present hKv4.3 short cDNA, PCR amplification was performed using primers that flanked the 57 bp insert in hKv4.3 long. The invention provides Kv4.3 polypeptides, polynucleotides, and methods for producing these polynucleotides. The Kv4.3 polypeptides and polynucleotides are useful in the diagnosis, treatment and screening of human diseases relating to an excess or deficiency of hKv4.3 activity, including Alzheimer's disease and heart disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                    The present sequence is that of cDNA encoding the long isoform of novel thuman potassium channel Kv4.3. To obtain the cDNA, oligonuclectides based on the published rat sequence were used to screen a whole heart cDNA library. A 511 bp fragment was obtained and used as a probe to rescreen the library. The resulting clones lacked the extreme 5' and 3' coding regions, and 5' and 3' RACE was therefore used to amplify these sequences from a human brainstem cDNA library. 2 Isoforms of human Kv4.3 were identified. One form is full-length (hKv4.3 long) while the second form that a deletion of 19 amino acids in the carboxy domain after the predicted sixth transmembrane domain (hKv4.3 short). Human heart corimarily expresses hKv4.3 long, whereas human brain contains both forms. The invention provides Kv4.3 polypeptides, polynucleotides, and methods for producing these polynucleotides. The Kv4.3 polypeptides and methods corrected the second in the diagnosis, treatment and screening of human diseases relating to an excess or deficiency of hKv4.3 activity, including Alzheimer's disease and heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide encoding human Kv4.3 potassium channel polypeptide, useful as probe in a diagnostic method for detecting acid encoding human Kv4.3, and for treating Alzheimer's and heart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                23-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                            This cDNA sequence codes for human Kv potassium channel hKv4.3 (see CC AAW79589). It shows about 92% identity in 1913 nucleotides to rat Kv4.3. CC A1914 bp fragment corresponding to hKv4.3 full-length cDNA was isolated from human heart cDNA by PCR amplification (see AAV61574-77). Another CC claimed polynucleotide (see AAV61572) encodes an isoform (see AAW79599) CC of hKv4.3 having an additional 19 amino acids. The invention relates to these hKv4.3 polynucleotides and polypeptides and to methods for CC producing such polypeptides by recombinant techniques. Also claimed are methods for utilising the hKv4.3 polynucleotides for the treatment of cc subjects in need of enhanced or reduced activity or expression of hKv4.3 CC polypeptide. These include the treatment of cardiac arrhythmias and CC Alzheimer's disease. The invention can also be used to identify agonists CC and antagonists of hKv4.3, and to detect disease associated with CCC inappropriate hKv4.3 expression or activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                           This cDNA sequence codes for human Kv potassium channel hKv4.3 (see AAW79591). It was isolated using expressed sequence tag analysis. The sequence has about 91% identity in 1914 nucleotide residues with rat Kv4.3 potassium channel. Full-length hKv4.3 cDNA clones (see AAV61571-72) are also claimed. The invention relates to hKv4.3 polynucleotides and polypeptides and to methods for producing such polypeptides by recombinant techniques. Also claimed are methods for utilising hKv4.3 polynucleotides for the treatment of subjects in need of enhanced or reduced activity or expression of hKv4.3 polypeptide. These include the treatment of cardiac arrhythmias and Alzheimer's disease. The invention can also be used to identify agonists and antagonists of hKv4.3, and to detect disease associated with inappropriate hKv4.3 expression or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New potassium channel polypeptides, hKv4.3 poly:nucleotide(s) useful in the treatment arrhythmias and Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim

```

```
This cDNA sequence codes for human Kv potassium channel hKv4.3 (see AAW79590). It shows about 92% identity in 1932 nucleotides to rat Kv4.3. A 1914 bp fragment corresponding to hhKv4.3 full-length cDNA was isolated from human heart cDNA by PCR amplification (see AAV61574-77). Another claimed polynucleotide (see AAV61571) encodes an isoform (see AAW79589) of hKv4.3 having 19 fewer amino acid residues. The invention relates to these hKv4.3 polynucleotides and polypeptides and to methods for producing such polypeptides by recombinant techniques. Also claimed are methods for utilising the hKv4.3 polynucleotides for the treatment of subjects in need of enhanced or reduced activity or expression of hKv4.3 polypeptide. These include the treatment of cardiac arrhythmias and Alzheimer's disease. The invention can also be used to identify agonists and antagonists of hKv4.3, and to detect disease associated with inappropriate hKv4.3 expression or activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                   The invention relates to a nematode worm that expresses a heterologous nucleotide sequence encoding a functional voltage-gated potassium channel of the Kv4 family, or its analog, mutant, variant, homolog, ortholog, capart or fragment. The nematode worm is useful in determining whether a compound interacts with the voltage-gated potassium channel of the Kv4 capart or whether a compound is an agonist, antagonist, opener and/or blocker of the voltage-gated potassium channel expressed by the nematode worm. The methods are used for identifying and developing compounds that compounds may be used in the development and/or preparation of compounds may be used in the development and/or preparation of these may be used in preparing compositions for pharmaceutical, agrochemical and/or veterinary use. These may be used in preparing compositions for preventing or treating capares or conditions such as arrhythmia, tachycardia, congestive heart failure, epilepsy, stroke, traumatic brain injury, anxiety, insomnia, capareter's disease or arrhythmia, tachycardia, congestive heart strained or preparation of capareter's disease or arrhythmia, tachycardia, congestive heart capareter's disease or arrhythmia arrhythmia archycardia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antiarrhythmic; cardiovascular; anticonvulsant; cerebroprotective; tranquiliser; sedative; neuroprotective; nootropic; antiparkinsonian; nematode worm; voltage-gated potassium channel; Kv4; agonist; antagonist; blocker; pharmaceutical; agrochemical; veterinary; arrhythmia; tachycardia; congestive heart failure; epilepsy; stroke; traumatic brain injury; anxiety; insomnia; Alzheimer's disease; Parkinson's disease; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nematode worm expressing a heterologous nucleotide sequence encoding a functional voltage-gated potassium channel of the Kv4 family, useful for determining compounds that interact with the voltage-gated potassium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        15-MAY-2002; 2002GB-00011123

                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel potassium channel protein (I) that is either human Kv4.1 or Kv4.2. Eukaryotic cells that express potassium channels containing (I) are used to identify and test: (i) compounds for treatment of neurodegenerative diseases (autism, epilepsy, ischemia, stroke; Alzheimer's, Parkinson's and Huntington's diseases) or cardiac arrhythmia, or those that improve learning capacity and memory; and (ii) activators of protein kinases. Host cells that express (I) can identify agents that do not interact significantly with channels and control I to (a quickly activated transient current), so lack the side effects of known anti-arrhythmic agents. They also eliminate, or reduce, the need
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; Kv4.1; potassium channel protein; Kv4.2; autism; epilepsy; neurodegenerative disease; ischemia; stroke; Alzheimer's disease; Parkinson's disease; Huntington's disease; cardiac arrhythmia; melearning capacity; protein kinase activator; anti-arrhythmic; ss.

```

This invention describes a novel ovarian tumour protein which can be used to detecting the presence of an ovarian cancer in a patient by stimulating and/or expanding T cells specific for the tumour protein. The products of the invention can also be used in a method to inhibit the development of a cancer in a patient comprising (a) incubating CD4+ and/or CD8+ T cells isolated from a patient with at least one ovarian tumour protein, such that T cell proliferate and (b) administering to the patient the proliferated T cells. The cytostatic polynucleotides or polypeptides described in the invention are useful for treating or inhibiting the development of cancer, particularly ovarian cancer and for stimulating and/or expanding T cells specific for a tumour protein or for gene therapy.
